INTRODUCTION

This report presents basic income, population movement and fertility estimates from the 1961 Census of Canada by census tract for each of the twenty-three tracted cities. Income distributions and averages are shown for individuals, families, persons not in families and family households. Average income per household and the average income of household heads are also shown. Population movement estimates show non-movers and movers over the 1956-1961 period classified by type of movement. Fertility estimates show the number of women ever married and the number of children born per 1,000 ever-married women.

The estimates of population by mobility status were derived from a twenty per cent sample of persons 15 years old and over residing in private households. The mobility status of persons 5-14 years of age was assumed to be the same as that of the family head. Fertility estimates were obtained from a twenty per cent sample of ever-married women 15 years old and over enumerated in private households. Income estimates were derived from a twenty per cent sample of the population 15 years old and over residing in private non-farm households.

The samples excluded institutions and other collective-type households such as hotels and large lodging houses. The sample counts were weighted to the total number of individuals residing in private households within each census tract to obtain aggregate estimates. Because of the above exclusions, estimates published in this report are not comparable to the total population counts published in Reports 95-516 to 95-538, Census Tract Series, 1961 Census of Canada.

Census tracts are designed to be relatively uniform in area and population, and each is fairly homogeneous with respect to economic status and living conditions. They were established in co-operation with local authorities, and wherever possible, local census tract committees were formed to delineate the areas.

The symbol (--) denotes that the total for a given group was less than 250.

The symbol (—) indicates that no individual was drawn into the sample.

DEFINITIONS

Household

A household consists of a person or group of persons occupying one dwelling. It usually consists of a family group, with or without lodgers, employees, etc. However, it may consist of a group of unrelated persons, of two or more families sharing a dwelling, or of one person living alone. A dwelling is defined as a structurally separate set of living quarters with a private entrance either from outside the building, or from a common hall, lobby, vestibule or stairway inside.

Family

A family, for census purposes, consists of a husband and wife with or without children who have never married, or a parent with at least one child who has never married, living together in the same dwelling. Adopted children, stepchildren and guardianship children (or wards) under 21 are counted as own children.

Once a child has married, he or she is no longer considered as a member of the parents' family, for census purposes, even if continuing to live in the same household. A married son and his wife living with his parents' family, for example, constitute a second family unit within the same household. Similarly, a widowed daughter with her children living with her parents' family is another example of a separate family.

Le présent rapport donne, d'après le recensement de 1961 et pour chacune des vingt-trois cités subdivisées en secteurs de recensement, des estimations du revenu de base, du mouvement de la population et de la fécondité. Les répartitions et les moyennes du revenu sont indiquées à l'égard des particuliers, des familles, des personnes non membres de familles et des ménages familiaux. Le rapport donne aussi le revenu moyen par ménage et le revenu moyen des chefs de ménage. Les estimations du mouvement de la population portent sur les personnes qui n'ont pas déménagé et sur celles qui ont déménagé de 1956 à 1961, classées par type de mouvement. Quant à la fécondité, les estimations donnent le nombre de femmes déjà mariées et le nombre d'enfants pour 1,000 femmes déjà mariées.

Les estimations de la population suivant la mobilité sont tirées d'un échantillon de 20 p. 100 des personnes âgées de 15 ans et plus demeurant dans des ménages privés. Il est supposé que la mobilité des personnes âgées de 5 à 14 ans est la même que celle du chef de ménage. Les estimations quant à la fécondité sont tirées d'un échantillon de 20 p. 100 des femmes déjà mariées, âgées de 15 ans et plus et dénombrées dans les ménages privés. Celles du revenu sont tirées d'un échantillon de 20 p. 100 de la population âgée de 15 ans et plus demeurant dans des ménages non agricoles privés.

Les échantillons excluent les institutions et autres ménages du type collectif tels que les hôtels et les grandes maisons de chambres. Les chiffres de l'échantillon ont été pondérés suivant le nombre de particuliers demeurant dans des ménages privés dans chacun des secteurs de recensement afin d'obtenir des estimations d'ensemble. En raison des exclusions ci-dessus mentionnées, les estimations contenues dans le présent rapport ne peuvent être comparées aux chiffres de la population totale publiés dans les Rapports 95-516 à 95-538 de la série Secteurs de recensement, recensement du Canada de 1961.

Les secteurs de recensement sont conçus de façon qu'ils aient à peu près la même étendue et la même population et que chacun soit suffisamment homogène quant à la situation économique et les conditions de vie. Ils ont été établis en collaboration avec les autorités locales et, là où il a été possible de le faire, des comités locaux ont été créés et chargés de les délimiter.

Le signe conventionnel (--) indique que pour un groupe donné le chiffre est de moins de 250.

Le signe conventionnel (—) indique qu'aucune personne ne fait partie de l'échantillon.

DÉFINITIONS

Ménage

Un ménage se compose d'une personne ou d'un groupe de personnes occupant un logement. Il consiste ordinairement en un groupe familial avec ou sans locataires de chambres, employés ou autres personnes. Il peut aussi se composer de personnes non apparentées, de deux familles ou plus partageant le même logement ou d'une personne vivant seule. Un logement est une série de locaux d'habitation distincts quant à la structure avec entrée privée de l'extérieur ou donnant sur un corridor, un vestibule ou un escalier intérieur commun.

Famille

Pour les besoins du recensement, une famille se compose d'un époux et d'une épouse avec ou sans enfants célibataires ou de l'un ou l'autre avec au moins un enfant célibataire, demeurant ensemble dans le même logement. Les enfants adoptifs, les beaux-enfants et les enfants en tutelle (les pupilles) âgés de moins de 21 ans sont comptés avec les enfants.

Aux fins du recensement, l'enfant, une fois marié, ne fait plus partie de la famille de ses parents, même s'il continue à habiter le même logement. Par exemple, un fils marié et son épouse demeurant avec les parents du fils forment une seconde unité familiale dans le même ménage. De même, une fille veuve et ses enfants demeurant avec la famille de ses parents est un autre exemple d'une famille distincte.

Persons not in families

Persons not in families are those persons living alone, living with unrelated individuals (as lodgers, employees or partners), or with relatives but not in a husband-wife or parent-child relationship. If related to the household head, they may be a widowed parent of the household head, a sister or brother, aunt or uncle, or other category of relative.

A child who has been married and is living with a parent or parents is not considered, for census purposes, to be living in a parent-child relationship and is classed with persons not in families, unless he or she is a member of a second family within the same household.

Family household

Family households are those households where the head of the household is also head of a family. This definition differs somewhat from the definition of family households used in Volume II and Reports 95-516 to 95-538, since it excludes those households where a family is present and the head of the household is not head of a family.

Income

All individuals residing in sample households were asked to report total income received from each of the sources listed below for the twelve-month period ending May 31, 1961, or, if this figure could not be provided, for the calendar year 1960.

The sources were:

- (a) gross cash wages, salaries, commissions, and tips (before deductions for income tax, pensions, unemployment insurance, etc.);
- (b) net income (gross income less operating expenses) received from own business or from a professional practice, but exclusive of net income earned from operation of a farm;
- (c) family allowances;
- (d) old-age assistance and old-age security payments;
- (e) other government transfer payments, e.g., unemployment insurance, workmen's compensation, veterans' pensions and allowances, disability pensions, mothers' allowances, etc.;
- (f) retirement pensions;
- (g) bond and bank interest and dividends;
- (h) other investment income, e.g., net rents, mortgage interest, estate income, etc.;
- (i) all other money income, e.g., annuities, income from roomers and boarders, alimony, etc.

Individual income is the total of the above sources of income reported by each person 15 years of age and over.

Total family income is the total of the above sources of income reported by each member of the family 15 years of age and over, and, in the case of persons not in families the total income received by the individual.

Average household income includes the total of the above sources of income reported by all members of households 15 years of age and over regardless of relationship to household head. Average income of household head is limited to the total of the above sources of income reported by household heads.

Population movement

Mobility status was determined on the basis of the reported usual place of residence on June 1 in 1956 and in 1961. If a person lived in the same dwelling on both dates that person was defined as a non-mover. If the dwelling where

Personnes non membres de familles

La personne non membre d'une famille est une personne qui vit seule, avec d'autres à titre de locataire de chambres, d'employé ou d'associé, ou avec d'autres parents sans lien de mari à femme ou de père ou mère à enfant. Apparentée au chef du ménage, elle est peut-être un veuf ou une veuve, une soeur ou un frère, une tante ou un oncle ou quelque autre parent.

Aux fins du recensement, un enfant marié demeurant avec son père ou sa mère ou les deux, n'est pas considéré, en raison de son mariage, vivre dans une situation de parent-enfant et est classé avec les personnes hors famille, à moins qu'il ne fasse partie d'une seconde famille au sein du même ménage.

Ménages familiaux

Les ménages familiaux sont ceux dont le chef est aussi chef d'une famille. Cette définition diffère quelque peu de la définition des ménages familiaux employée dans le volume II et les Rapports 95-516 à 95-538, car elle exclut les ménages où se trouve une famille et où le chef du ménage n'est pas le chef d'une famille.

Revenu

Toutes les personnes qui faisaient partie des ménages échantillon devaient déclarer leur revenu provenant de chacune des sources ci-dessous mentionnées durant les 12 mois terminés le 31 mai 1961 ou, si ce chiffre ne pouvait être obtenu, durant l'année civile 1960.

Les sources:

- a) salaire, traitement, commission, pourboires bruts (avant impôt sur le revenu, pensions, assurance-chômage, etc.);
- b) revenu net (revenu brut moins frais d'exploitation) provenant d'une entreprise autonome ou de l'exercice d'une profession mais sans le revenu net provenant de l'exploitation d'une ferme;
- c) allocations familiales;
- d) prestations de sécurité de la vieillesse et d'assistance-vieillesse;
- e) autres paiements de transfert des gouvernements (assurance-chômage, indemnisation des accidentés du travail, pensions et allocations aux anciens combattants, pensions d'invalidité, allocations maternelles, etc.);
- f) pensions de retraite;
- g) intérêt et dividendes (obligations et banques);
- h) autre revenu de placement (loyer net, intérêt hypothécaire, revenu successoral, etc.);
- i) tout autre revenu monétaire (rentes, revenu provenant de locataires de chambres et de pensionnaires, pension alimentaire, etc.).

Le revenu particulier est l'ensemble du revenu provenant des sources ci-dessus mentionnées et déclaré par chaque personne âgée de 15 ans et plus.

Le revenu familial total est l'ensemble du revenu provenant des sources ci-dessus mentionnées et déclaré par chaque personne âgée de 15 ans et plus et, dans le cas des personnes non membres d'une famille, le revenu total déclaré par la personne.

Le revenu moyen du ménage comprend l'ensemble du revenu provenant des sources ci-dessus mentionnées et déclaré par tous les membres du ménage âgés de 15 ans et plus, sans égard au lien avec le chef du ménage. Le revenu moyen du chef du ménage se limite à l'ensemble du revenu provenant des sources ci-dessus mentionnées et déclaré par les chefs de ménage.

Mouvement de la population

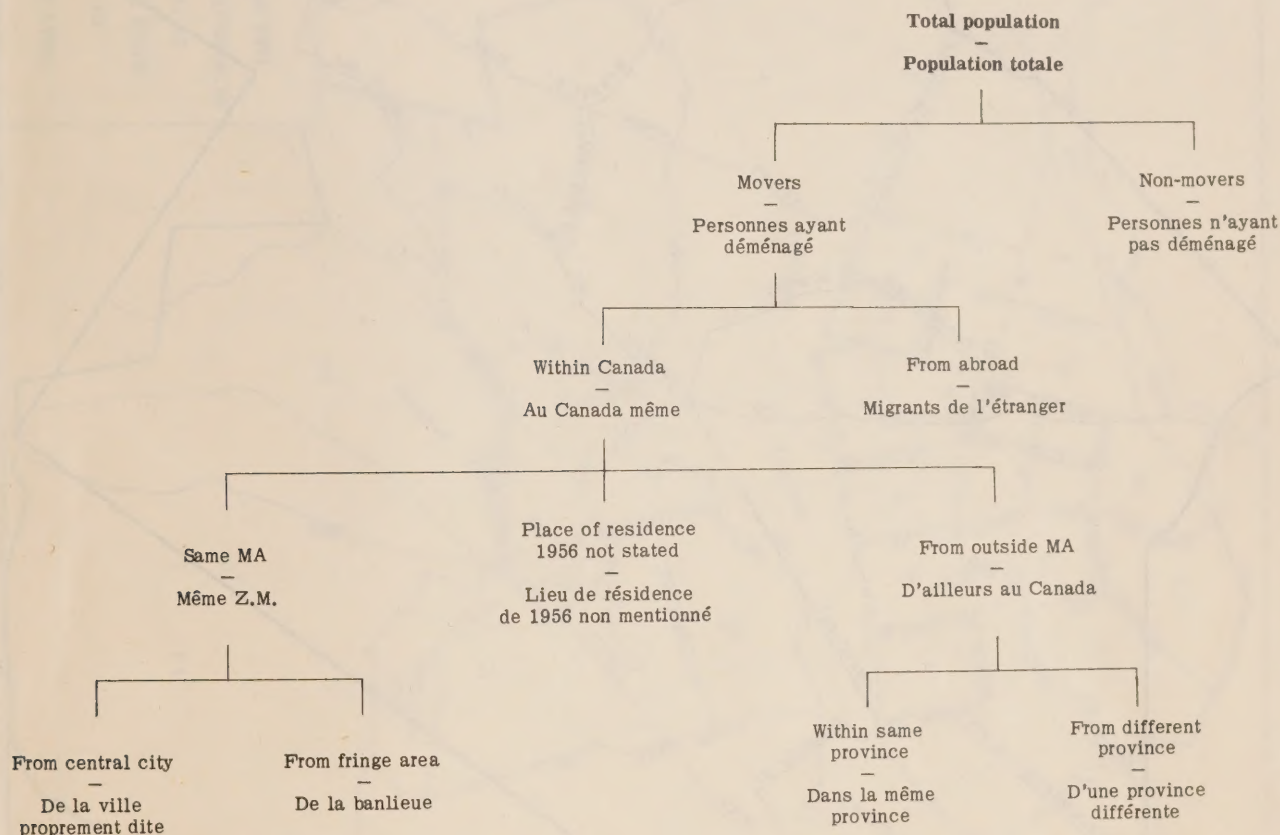

La mobilité a été déterminée d'après la résidence habituelle déclarée le 1er juin 1956 et en 1961. Si une personne occupait le même logement aux deux dates, elle était définie comme "n'ayant pas déménagé". Si, au recensement de 1961, une personne

a person lived on the 1961 Census date differed from that five years earlier, that person was defined as a mover. Within the limits of the data collected in the 1961 Census, return movements and multiple movements made during the preceding five-year period are not accountable.

Movers were then classified according to the type of residence in 1956 as follows:

n'occupait pas le même logement que cinq ans plus tôt, elle était définie comme "ayant déménagé". Les données recueillies lors du recensement de 1961, ne rendent pas compte des mouvements de retour et des mouvements multiples.

Les personnes qui ont déménagé ont été classées suivant le genre de résidence en 1956:

Fertility

The data on children born per 1,000 ever-married women are based on the question "How many live-born children have you had?" This question was asked of women 15 years old and over in sample households who reported as ever having been married (i.e., married, widowed or divorced). Enumerators were instructed to exclude still-born children as well as adopted children and stepchildren but to include children born of a previous marriage.

Age

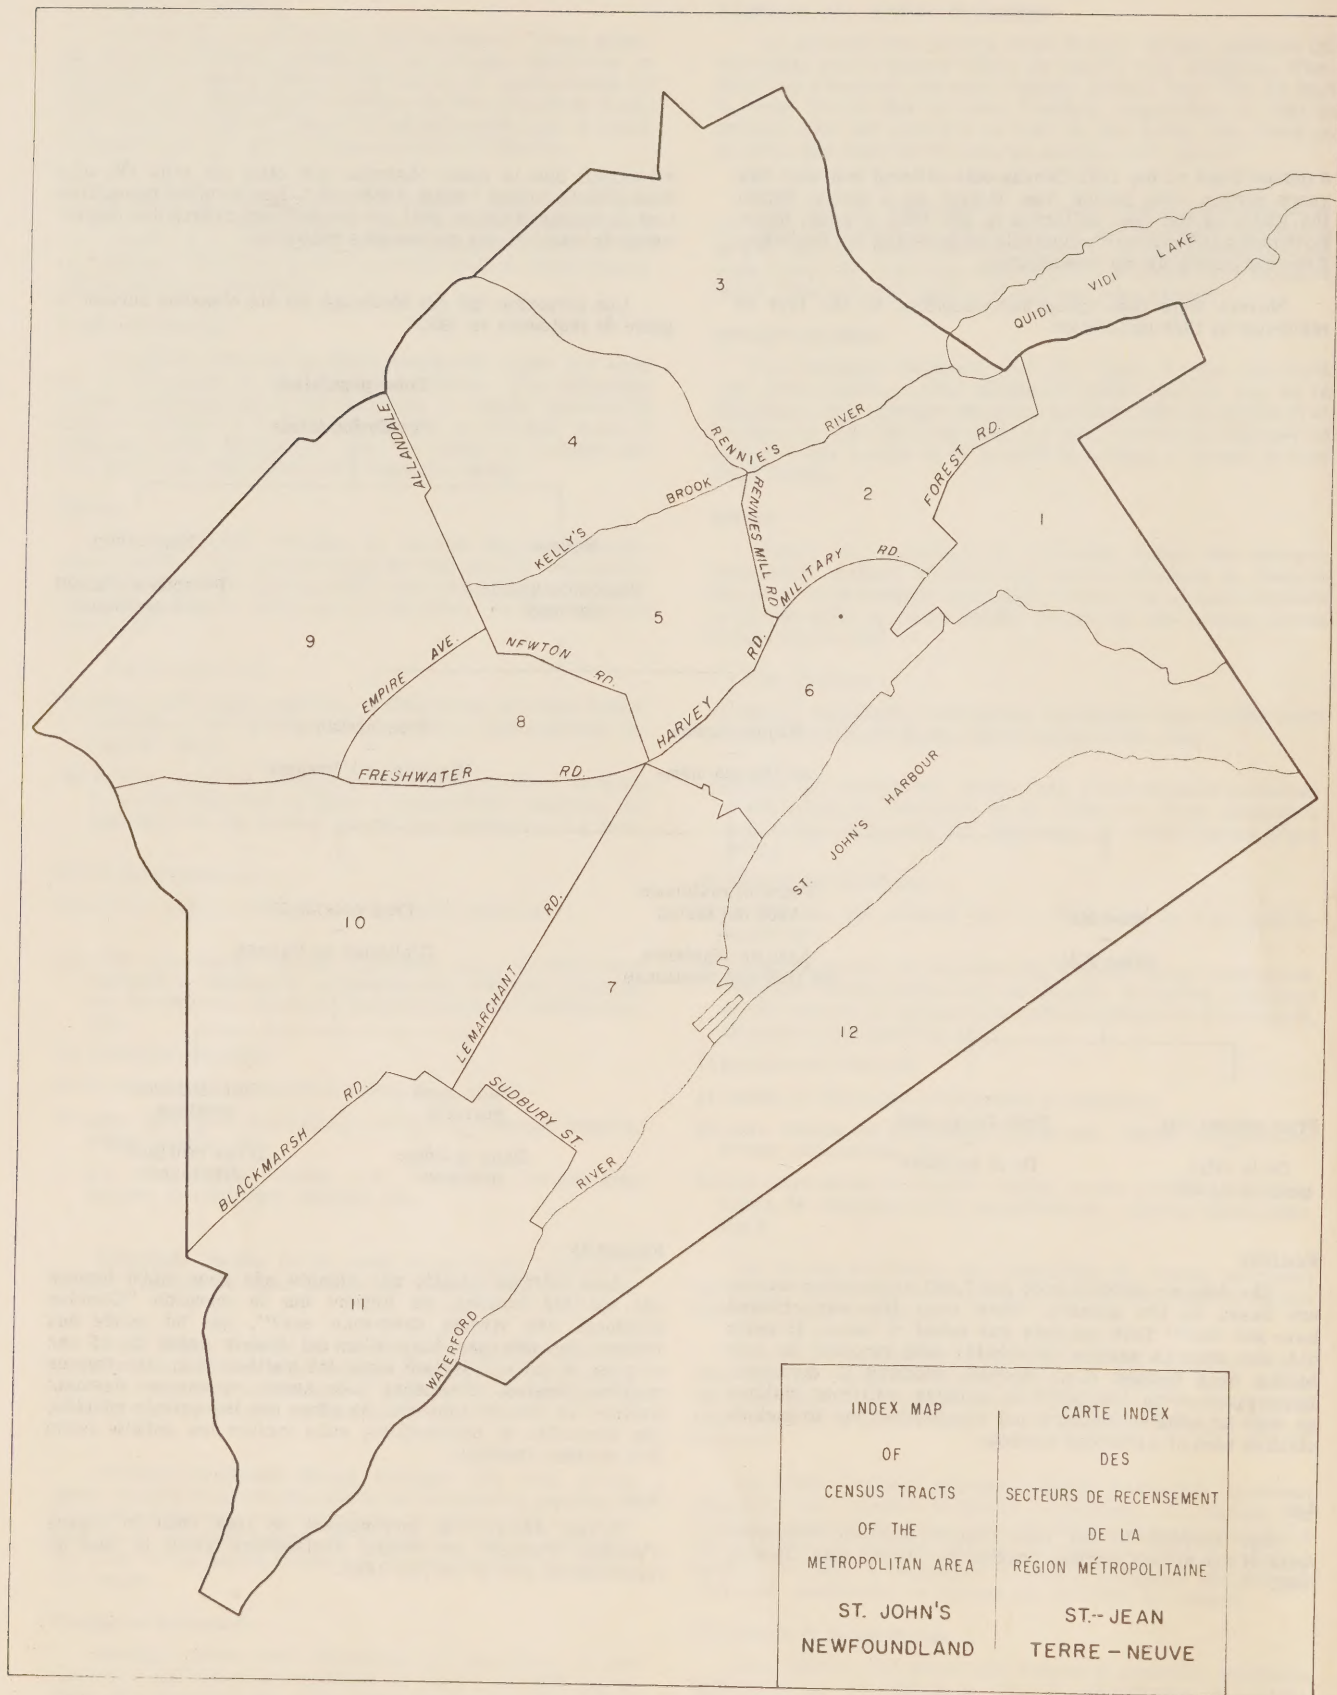

Age reported in the 1961 Census was the completed years of age at last birthday prior to the census date, June 1, 1961.

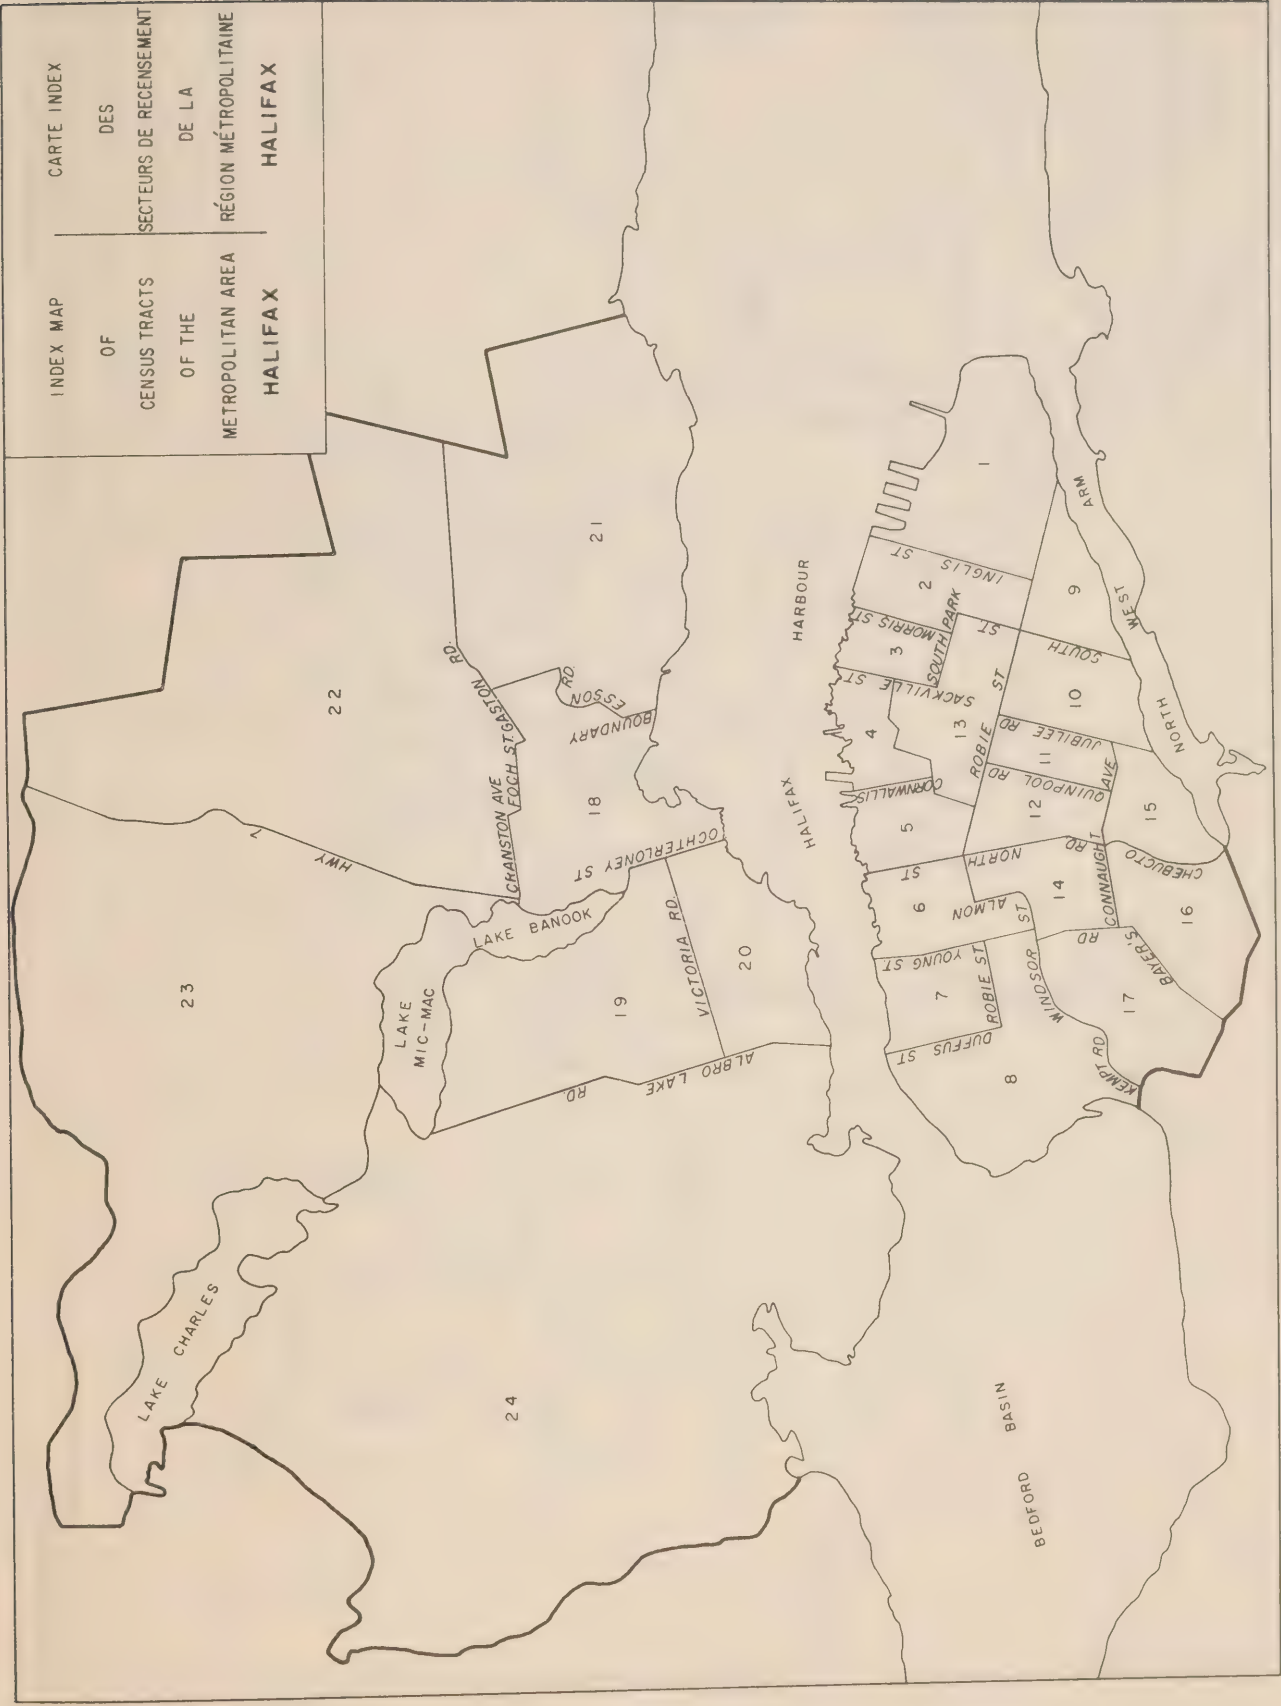

Fécondité

Les chiffres relatifs aux enfants nés pour 1,000 femmes qui ont été mariées, se fondent sur la question "Combien d'enfants nés vivants avez-vous eus?", qui fut posée aux femmes des ménages échantillon qui étaient âgées de 15 ans et plus et qui ont déclaré avoir été mariées (e.g., les femmes mariées, veuves, divorcées). Les agents recenseurs devaient exclure les enfants mort-nés, de même que les enfants adoptés, les beaux-fils et belles-filles, mais inclure les enfants issus d'un mariage antérieur.

Âge

L'âge déclaré au recensement de 1961 était le nombre d'années révolues au dernier anniversaire avant la date du recensement, soit le 1er juin 1961.
